

## WILL COMPUTERS EVER BE MORE INTELLIGENT THAN PEOPLE?

An essay by Georgi Georgiev, 11 a class

Every day the factories produce new machines which save lives of hundreds of people and make the life of man easier, thanks to a device called – computer. But this intervention in human life allows us to ask ourselves questions such as: whether the PC will become more intelligent than the man.

In each science fiction movie that you've seen there's always computers which is more intelligent than the people. Will this happen? Almost certainly it will. The PC - Great invention that was invented by a Bulgarian John Atanasov who started new era, the era of computers. This device, which more or less changes the lives of almost everyone. Technology which is evolving with each passing minute. But the problem that computers will become more intelligent than the man is not so important. What matters is if they will ever start to think independently and take decisions themselves. Then humanity will be faced with a big enemy for the Planet Earth. But there is a solution: Electromagnetic pulse, which disables all electronics. However, if computers obey the laws of Asimov, which are:

"1. A robot may not injure a human being or, through inaction, allow a human being to come to harm.

2. A robot must obey any orders given to it by human beings, except where such orders would conflict with the First Law.

3. A robot must protect its own existence as long as such protection does not conflict with the First or Second Law. ", so, there's no reason to worry.

In this world where every day is different for engineering thought, we can not predict what will happen tomorrow. So only the future will show what will happen.
